

Contents

1	Introduction	1
1.1	Introduction	1
1.2	Preliminaries	3
1.3	First order scalar linear differential equations	21
1.4	Nonlinear scalar first order differential equations	38
2	Nonlinear scalar dynamical systems	51
2.1	Maximal solution and continuous dependence	52
2.2	Qualitative analysis	63
2.3	Bifurcations	90
2.4	Numerical solution	108
3	Linear Systems	121
3.1	Introduction	121
3.2	Matrix exponential	128
3.3	Linear systems in the plane	143

3.4	Invariant subspaces	187
3.5	Nonhomogeneous linear systems	197
4	Nonlinear dynamical systems	218
4.1	Introduction	218
4.2	Linearization and Hartman-Grobman theorem	231
4.3	Stable manifolds and stationary saddle solutions	270
4.4	Limit cycles and periodic solutions	281
5	Calculus of Variations	315
5.1	Introduction	315
5.2	The \mathcal{P}_v problem	321
5.3	The Euler-Lagrange equation	327
5.4	Sufficient conditions and autonomous equation	335
6	Optimal Control Theory	343
6.1	Introduction	343
6.2	The Maximum Principle of Pontryagin	349
6.3	Mangasarian and Arrow conditions	369
6.4	Final state conditions	380
6.5	Infinite horizon	400
A	Topology in Vector Normed Spaces	459
B	Calculus and Real Analysis	471

C Additional proves and results	478
C.1 Legendre-Clebsch	478
